

Student Diversity Report 2010/11

Strategic Planning Service

1. Executive Summary

This report fulfils our statutory duty to monitor student activity against the four protected characteristics gender, age, ethnicity and disability. Below is a summary of some of the key observations from the data, highlighting the change from the previous year and the position in 2010/11. (latest year is 2009/10 for retention and progression data). Note: appendices are from pages 13 to 40.

Total Enrolments Profile (section 3, page 3)

Enrolment data shows that whilst male enrolments increased to 44.7% they returned to a figure similar to 2008/9 of 43.6%. Students '20 & under' and '21 & over' remained stable at 48%: 52% over the period, while ethnicity remains at around 62% white students and 38% other ethnic groups. Around 15% of students declared as disabled, of those, 42.3% had declared a specific learning disability such as dyslexia, dyspraxia or AD(H)D.

Average Tariff Points on Entry (section 4, page 4)

The average tariff point gap between males and females has reduced this year from 22 to 13 points. The gap between '21 & over' and '20 & under' students increased from 27 to 54 points. There is a small increase in the gap between black and ethnic minority (BME) students and white students this year from 13 points to 15 points, having significantly reduced in the previous two years. There is a gap of 3 points between students who have declared a disability and those who have not.

In Year Drop-out rate - % (section 5, page 6)

Female student dropouts reduced from 4.8% to 3.7% and a reduction in male student dropouts from 7.3% to 5.2%.. Dropouts for '20 & under' students reduced from 6.4% to 3.6% and '21 & over' students from 5.5% to 4.5%. White student dropouts reduced from 5.4% to 3.8% and in BME students from 7.1% to 4.7%, this reduces the gap between the groups of students from 1.7% to 0.9%. There has been a reduction in disabled student dropouts from 6.3% to 4.7% and in students without a declared disability from 6.1% to 4.1%.

Retention rate - % (section 6, page 8) – always one year behind

The retention data shows that 81.1% of male students and 84.5% of female students were retained in 2010/11. The retention of '20 & under' students are significantly higher than '21 & over' students at 87% against 75.7%, a gap of 11.3%. The retention of white students dropped by around 3%, with the gap between white and BME students narrowing from 2.6% to 1.6%. The retention of disabled students in was 79.8% compared with 83.7% previously, a drop of 4.1%. The retention of students without a declared disability was 83.7% compared with 85.4% previously.

Progression rate - % (section 7, page 9) – always one year behind

The progression data shows that both male and female students had better progression rates at 77.5% for male and 84.2% for female students. The gap between the two groups remains at 6.7%. The data shows that 83.6% of '20 & under' students progressed compared to 76.1% of '21 & over' students, leaving a 7.5% gap. More BME students progressed at 78.9% from 77.3% in the previous year. Whilst less white students progressed at 83.4% compared with 84% in the previous year. Less disabled students progressed at 77.2% compared with 79.2% in the previous year, whilst the progression of students without declared disability increased from 80% to 81.9%.

Good Honours Attainment rate - % (section 8, page 11)

Good honours attainment increased for females to 56.4% and males to 48.6%. There is a gap of 2.9% in favour of '20 & under' students. There is a 6.8% improvement for BME students from 38.3% to 45.1%. There was a 1.4% improvement in the results of white students from 59.2% to 60.6%.. Students without a declared disability have an improvement in results from 50.6% to 54.6%, by contrast the results of disabled students reduced from 48.2% to 45.4%. The national gap between disabled students and students without declared disability is 2.5%, at DMU it was 9.2%.

Version: 5 Date: 11/09/2012
(figure 6b on page 12 changed)

2. Introduction

This report provides numbers, proportions and related trends for key student areas of focus by the four protected characteristics gender, age, ethnicity and disability.

This report is intended for the Equality and Diversity Committee (EDC) to help make decisions and develop policies. It can help in the development of equality performance indicators or objectives which can be monitored and updated on an annual basis. The first report was produced in October 2011 using 'official' national data up to the 2009/10 academic year. This report uses the same sections updated with 2010/11 data.

Please note the following changes:

Data in this report follows the standard HESA rounding strategy which is to round all numbers to the nearest multiple of 5. See <http://www.hesa.ac.uk/index.php/content/view/146/178/> for further details. Analysis is based on actual values.

The 'application, accepts and new enrolments section has been removed to maintain the use of 'official' data. This information is however available on request, please contact SPS.

The good honours attainment section now shows first degree students only (the October 2011 report showed all undergraduates which includes HND/HNC qualifiers).

2.1. Report Structure

The areas of focus cover the statutory duty to monitor the student life cycle and include:

- the profiles of students enrolled at DMU
- the profile of students by average tariff points on entry
- the profile of students that drop-out within the year
- the profile of students achieving a 1st or 2i classification on their degree (good honours)

This report contains summary analysis for the areas listed above. Detailed data tables containing institution values are contained in the appendices, where the presented data has been rounded to nearest 5, but with analysis based on actual values. **Note: appendices are from pages 13 to 40.**

This report takes national statistics from the Heidi - the Higher Education Information Database for Institutions. For more information about this database, follow this link: <http://www.heidi.ac.uk/>.

National data for benchmarking is available on request, please contact SPS.

2.2. Parameters

The main data source for this report is the student HESA return as it is checked and stable, hence is the most accurate and reliable source.

The whole student population has been included for the enrolments profile section, while the tariff on entry, drop-out and good honours data varies depending on the area of focus – the student selection parameter is clearly shown under the section headings.

HESA data allows for national comparisons and benchmarking with similar HEIs.

2.3. Benchmarking

HESA data should be the source for any external publications and benchmarking purposes. The online data tool 'heidi', produced by HESA, can be utilised to generate annual benchmarking figures. If you are a member of staff and would like to produce benchmark HEI groups based on similar student profiles and/or would like to view other national higher education data then please contact SPS for access to the database and/or training.

3. Total Enrolments Profile

3.1. Gender

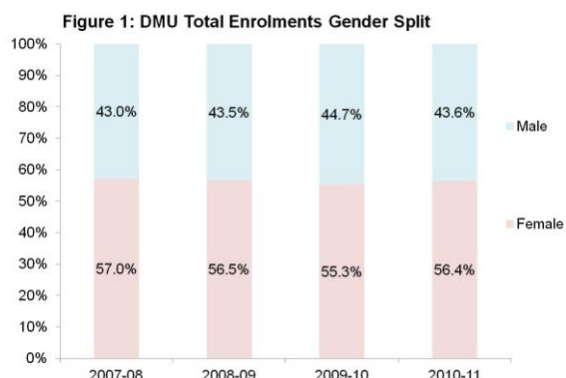

Figure 1 shows the gender split of the total student population at DMU for the past 4 years.

The proportion of male students has gradually increased between 2007/08 to 2009/10. The ratio of female: male students in 2010/11 were 56%:44%.

This pattern mirrors the national higher education sector. (heidi).

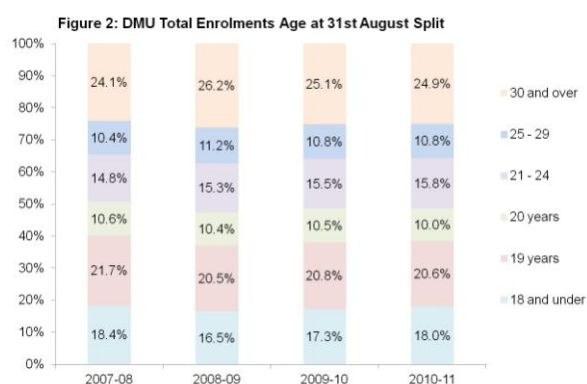

Enrolments data by mode, level of study and gender is shown in the appendix, table 1a on page 13.

3.2. Age

Figure 2 shows the age split of DMU students at 31st August in the years shown.

The proportion of '20 & under' students (20 years and under) is around 48% in DMU. Nationally, the proportion is around 34%.

Enrolments data by mode, level of study and age group is shown in the appendix, table 1b on page 14.

3.3. Ethnicity

Figure 1c: Total Enrolments Ethnicity Split (UK students only)

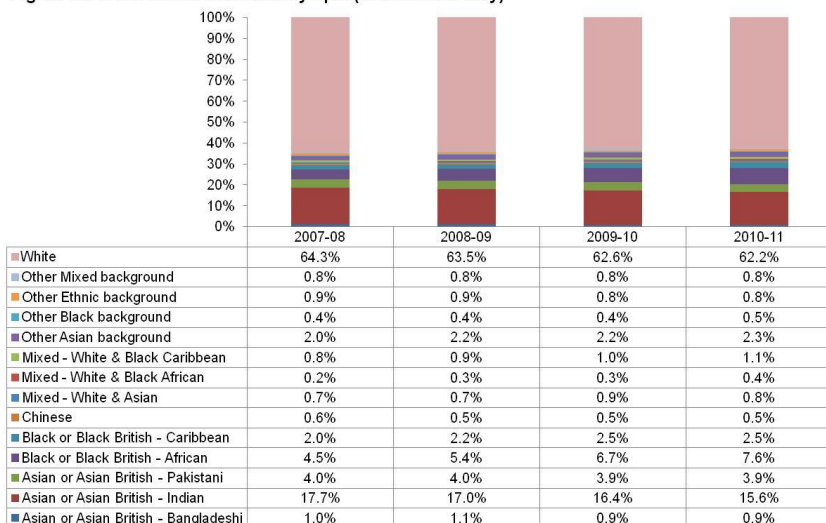

Figure 1c shows the ethnicity profile of DMU students from the UK over the past 4 years.

International students have been omitted from the proportions analysis to reduce the number of undeclared ethnicities and provide meaningful values.

International students' ethnicity data is shown in the section 3.3a below.

The proportion of non white students, referred to as Black or minority ethnic (BME)

students has increased by 2% from 2007/08 to 2009/10 and since then has remained at 38% in 2010/11 (100% minus 62% total white students) of the total DMU population. The largest proportion of BME students at DMU is Indian (15.6%). The largest growth in BME students has been in African students (4.5% in 2007/08 to 7.6% in 2010/11).

Nationally, the BME student population has remained at around 18% over the same period. In 2010/11, the largest proportion of BME students was African (4.1%), followed by Indian (3.3%) (heidi).

Enrolments data by mode, level of study and ethnicity is shown in the appendix, table 1c on page 15.

Note: Analysis excludes the 'Not known', 'Information refused' and missing data categories.

3.3a. International students' ethnicity

Figure 1ci: Total international enrolments 2010/11 - % ethnicity

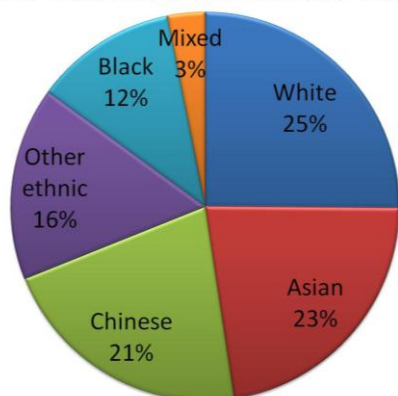

Figure 1ci show the proportional ethnic split of all DMU international students in 2010/11. International students include overseas, EU and Channel Island residents that have come to DMU to study.

The chart demonstrates the ethnic diversity of our international students, with 75% from with a BME background.

The proportion of student ethnicity that is not known/undisclosed from the international total was 12% in 2010/11; this is significantly higher than the UK student's proportion, which is only missing 1%.

Enrolments data by mode, level of study and ethnicity is shown in the appendix, table 1ci on page 19.

3.4. Disability

In DMU, the proportion of students that have declared a disability has remained around 15% over the last 4 years. Figure 1d shows the proportional split of the type of disability of these students.

In 2010/11, out of the students declaring they have a disability, 42.3% had a specific learning difficulty such as dyslexia, dyspraxia or AD(H)D, followed by 28.3% with a long standing illness or health condition such as cancer, HIV, diabetes, chronic heart disease, or epilepsy.

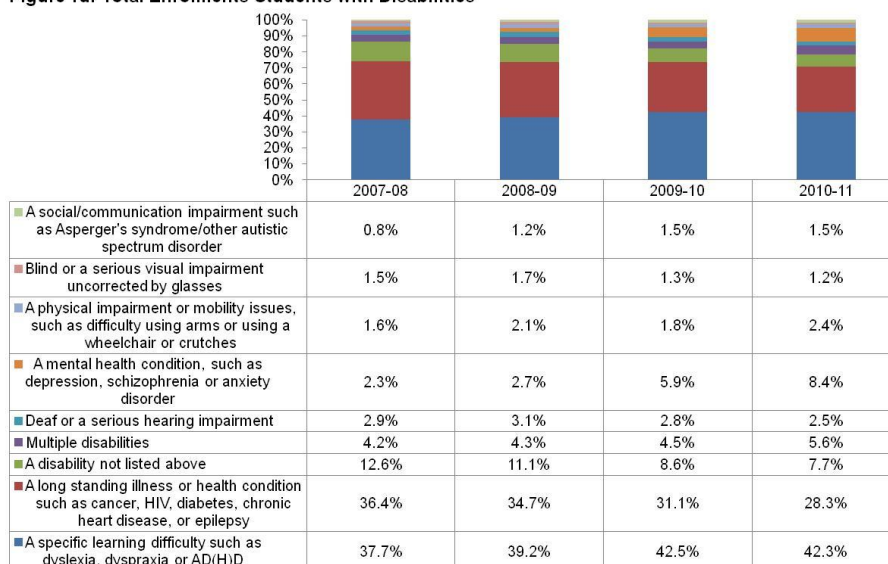

The largest growth has occurred in students declaring they have a mental health condition, such as depression, schizophrenia or anxiety disorder, rising from 2.3% in 2007/08 to 8.4% in 2010/11.

Nationally, the proportion of students declaring a disability has been around 7-8%.

Out of the students that declared a disability, 48% had a specific learning difficulty such as dyslexia, dyspraxia or AD(H)D and 12% with a long standing illness or health condition such as cancer, HIV, diabetes, chronic heart disease, or epilepsy. Students with mental health difficulties have increased over the period with 5.8% in 2007/08 rising to 8.3% in 2010/11. (heidi).

Enrolments data by mode, level of study and disability is shown in the appendix, table 1d on page 22.

Figure 1d: Total Enrolments Students with Disabilities

4. Average Tariff Points on Entry

Increasing the tariff requirements for new students and hence increasing the quality of intake has been the focus for DMU over the last few years. The following analysis looks at the profile all new students and their average tariff on entry when they entered DMU.

National data on entry tariff by student profile is not available from 'heidi', hence no national comparisons are provided.

4.1. Gender

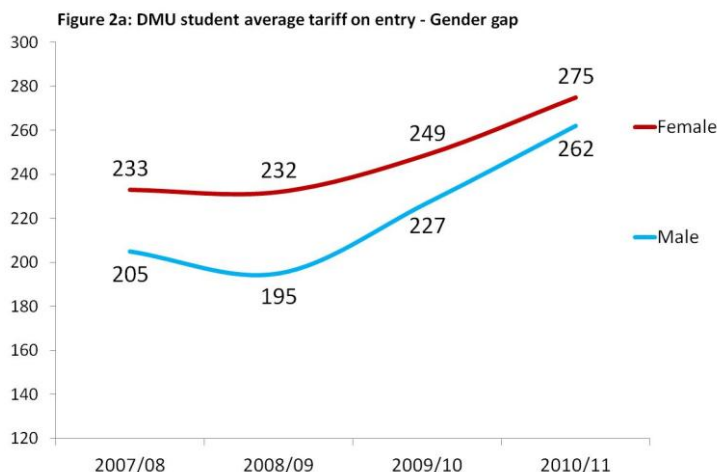

Figure 2a shows the average tariff on entry for new male and female DMU students over the last 4 years.

Female students enter with higher tariff scores than male students.

The average tariff on entry between the two groups has reduced over the last 4 years, with the difference just 13 points in 2010/11.

The largest gap has been 37 points with the 2008/09 entrants.

All data is shown in the appendix, table 2a on page 26.

4.2. Age

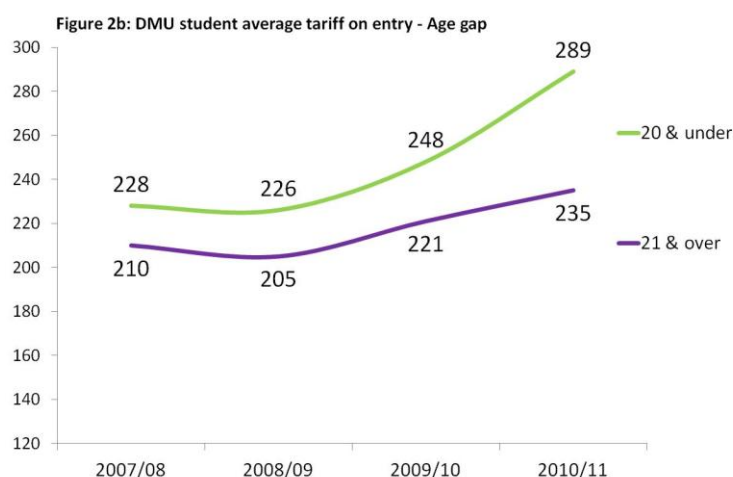

Figure 2b shows the average tariff on entry for new '20 & under' and '21 & over' DMU students for the last 4 years.

'20 & under' students enter with higher tariff scores than '21 & over' students.

The average tariff on entry between the two groups has increased over the last 4 years, with the difference 54 points in 2010/11.

All data is shown in the appendix, table 2b on page 26.

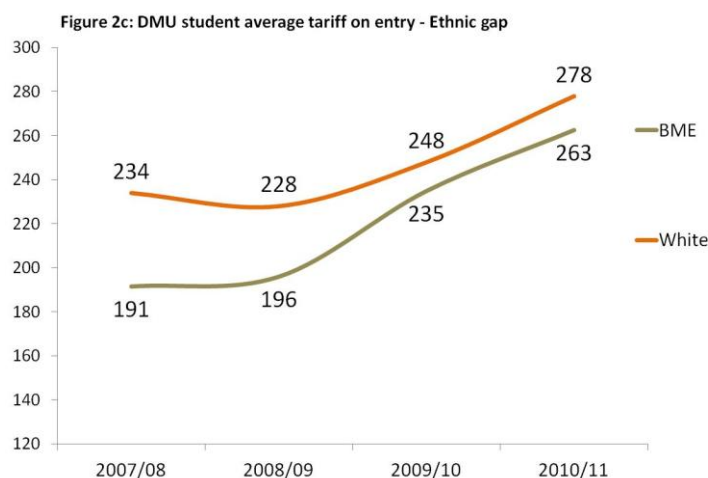

4.3. Ethnicity

Figure 2c shows the average tariff on entry for Black and minority ethnic (BME) and White DMU students for the last 4 years.

White students enter with higher tariff scores than BME students.

The average tariff on entry between the two groups has reduced over the last 4 years, with the difference just 15 points in 2010/11.

All data is shown in the appendix, table 2c on page 27.

4.4. Disability

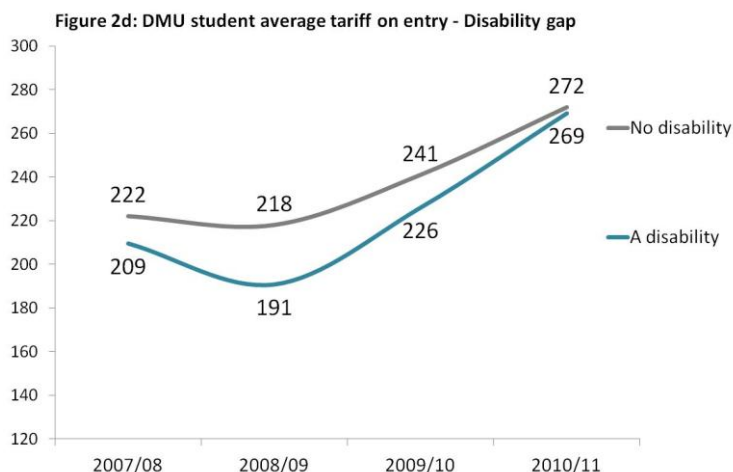

Figure 2d shows the average tariff on entry for disabled and not disabled DMU students for the last 4 years.

The average tariff on entry between the two groups has reduced over the last 4 years, with the difference just 3 points in 2010/11.

All data is shown in the appendix, table 2d on page 28.

5. In Year Drop-out rate

Dropout is a measure of students leaving during the academic session. The following analysis looks at the profile of all students that drop out of DMU within the academic year. A student is classed as a drop-out if they withdraw before 31 July each year. This analysis focuses on the movement into the next academic session. The report doesn't consider any other years. Persistently high drop-out rates for particular groups of students could indicate discrimination or lack of support in their studies.

National data on drop out rates by student profile is not available from 'heidi', hence no national comparisons are provided.

5.1. Gender

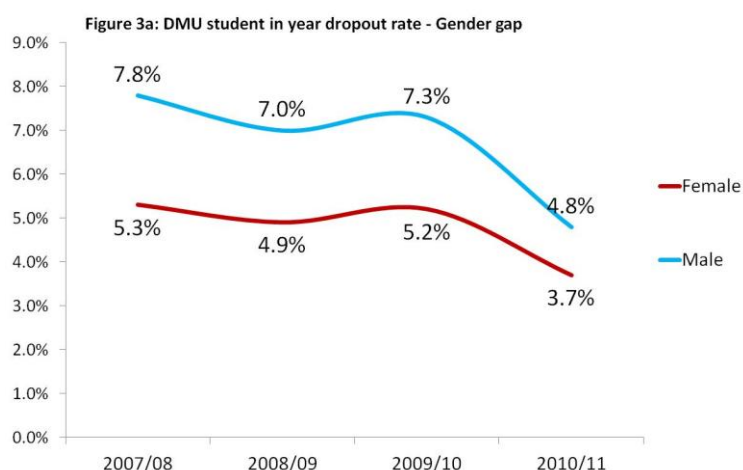

Figure 3a shows the in year drop-out rate for male and female DMU students over the last 4 years.

Female students have a lower drop out rate than male students.

The drop out rate between the two groups has reduced over the last 4 years, with the difference of 1.1% in 2010/11.

All data is shown in the appendix, table 3a on page 29.

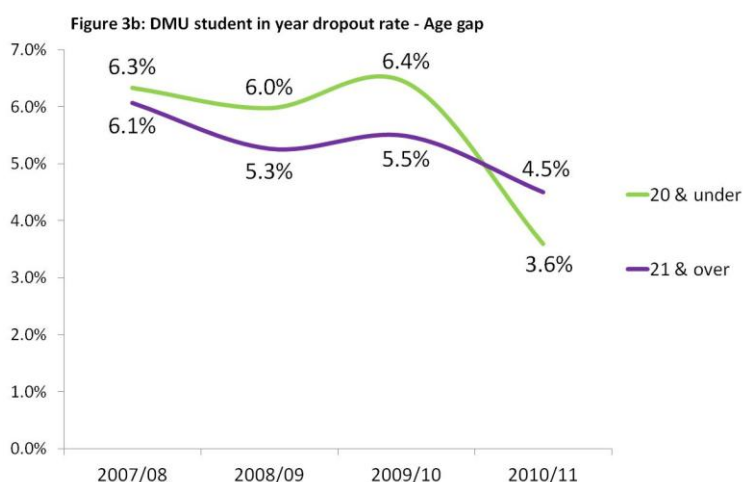

5.2. Age

Figure 3b shows the in year drop-out rate for '20 & under' and '21 & over' DMU students for the last 4 years.

'21 & over' students usually have a lower drop out rate than '20 & under' students, however in 2010/11 this view has reversed.

The drop out rate between the two groups has been varied over the last 4 years, with a difference of 0.9% in 2010/11 in favour of '20 & under' students.

All data is shown in the appendix, table 3b on page 29.

5.3. Ethnicity

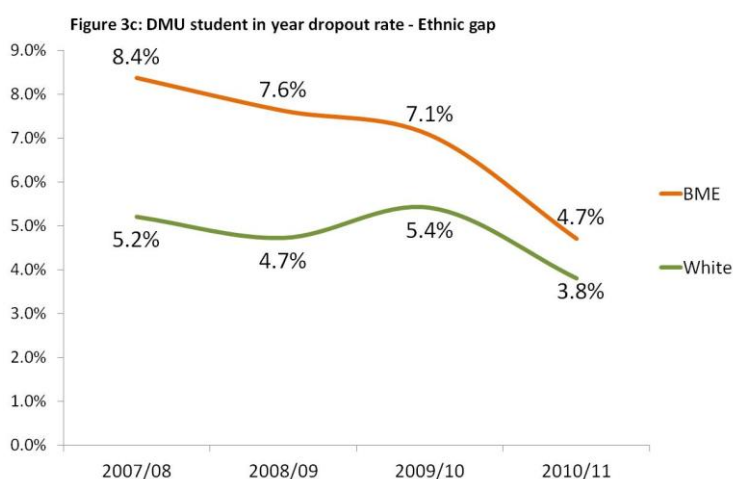

Figure 3c shows the in year drop-out rate for Black and minority ethnic (BME) and White DMU students for the last 4 years.

White students have a lower drop out rate than BME students.

The drop out rate between the two groups has reduced over the last 4 years, with the difference of just 0.9% in 2010/11.

All data is shown in the appendix, table 3c on page 30.

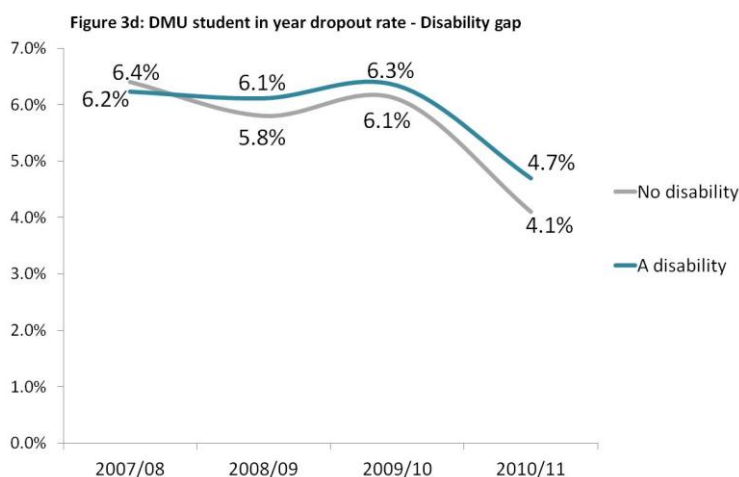

5.4. Disability

Figure 3d shows the in year drop-out rate for disabled and not disabled DMU students for the last 4 years.

Students without a disability have a slightly lower drop out rate than students with a disability.

The drop out rate between the two groups has remained similar over the last 4 years, with the difference of just 0.6% in 2010/11 in favour of students with no disability.

All data is shown in the appendix, table 3d on page 31.

6. Student Retention rate

Retention is a measure of students that are still actively studying on any programme year.

The following analysis looks at the profile of all first degree students and whether they are retained from one year to the next. First degree students are undergraduate students on a degree level programme.

The data analysed is from 2007/08 to 2009/10 only because of the retention calculation method – see the retention and progression report for more details.

The measure could be used as an indication of support levels for certain groups of students as a high retention rate would indicate mechanisms are in place to ensure all is being done to retain the student at the University.

National data on retention rates by student profile is not available from 'heidi', hence no national comparisons are provided.

6.1. Gender

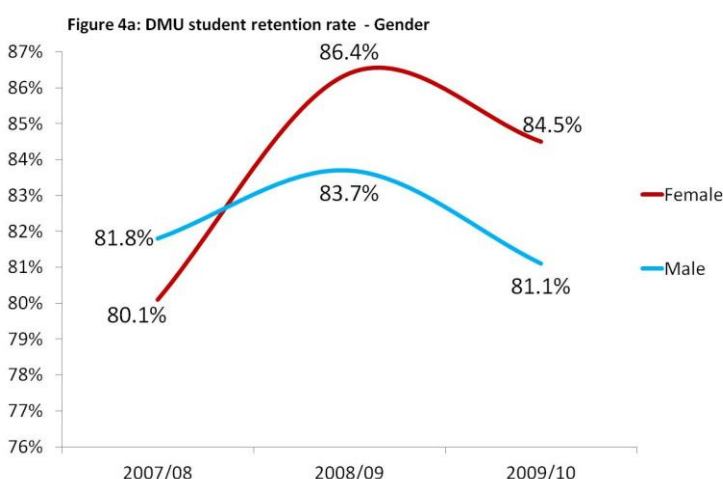

Figure 4a shows the retention rate for male and female DMU students from 2007/08 to 2009/10.

Female students have a higher retention rate than male students (with the exception of 2007/08).

The retention rate between the two groups has increased over the last 2 years, with the difference of 3.4% in 2009/10.

All data is shown in the appendix, table 4a on page 32.

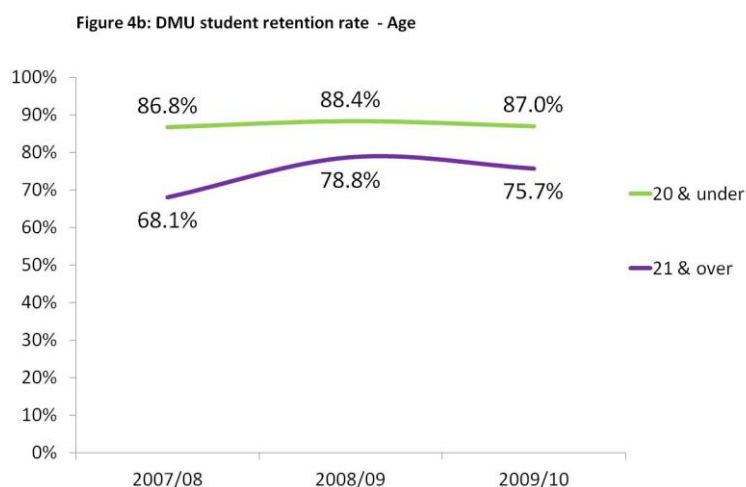

6.2. Age

Figure 4b shows the retention rate for '20 & under' and '21 & over' DMU students from 2007/08 to 2009/10.

'20 & under' students have a higher retention rate than '21 & over' students.

The retention rate between the two groups has reduced over the 3 year period, with the difference of 11.3% in 2009/10.

All data is shown in the appendix, table 4b on page 32.

6.3. Ethnicity

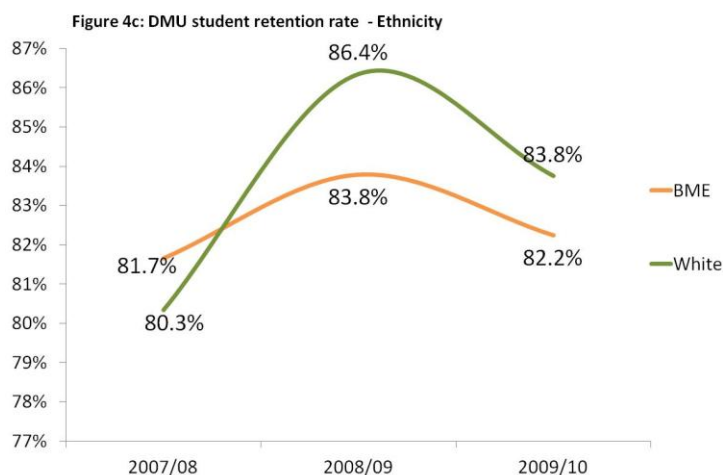

Figure 4c shows the retention rate for Black and minority ethnic (BME) and White DMU students from 2007/08 to 2009/10.

White students have a higher retention rate than BME students (with the exception of 2007/08).

The retention rate between the two groups has reduced over the last 2 years, with a difference of 1.6% in 2009/10.

All data is shown in the appendix, table 4c on page 33.

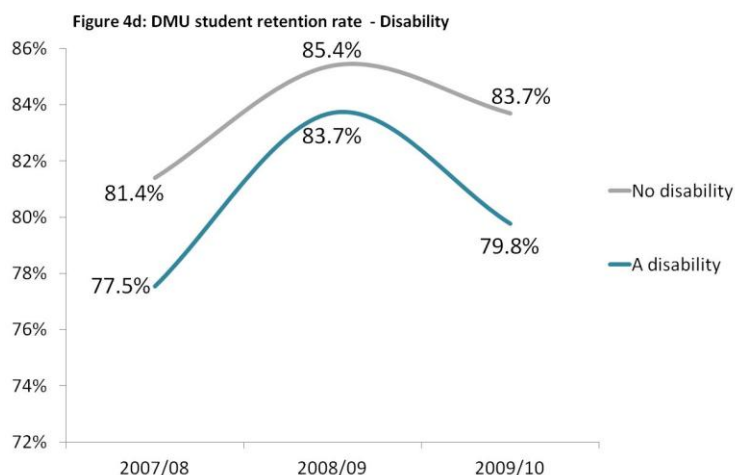

6.4. Disability

Figure 4d shows the retention rate for disabled and not disabled DMU students from 2007/08 to 2009/10.

Students without a disability have a higher retention rate than students with a disability.

The retention rate between the two groups has increased over the last 2 years, with a difference of 3.9% in 2009/10.

All data is shown in the appendix, table 4d on page 34.

7. Student Progression rate

Progression is a measure of the students that are actively studying and are on the next programme year.

The following analysis looks at the profile of all full time first degree students and whether they progressed to the next year.

The data analysed is from 2007/08 to 2009/10 only because of the progression calculation method – see the retention and progression report for more details.

Progression is when a student moves from one level to the next, and reflects that the students is passing enough of their assessments to move on to the next level and returning to the University to continue their studies.

National data on progression rates by student profile is not available from 'heidi', hence no national comparisons are provided.

Note: Analysis excludes the 'Not known', 'Information refused' and missing data categories.

7.1. Gender

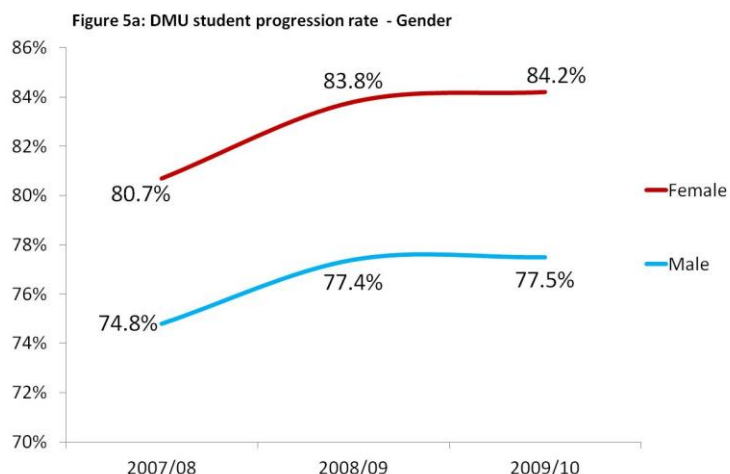

Figure 5a shows the progression rate for male and female DMU students from 2007/08 to 2009/10.

Female students have a higher progression rate than male students.

The progression rate between the two groups has increased over the 3 year period, with the difference of 6.7% in 2009/10.

All data is shown in the appendix, table 5a on page 35.

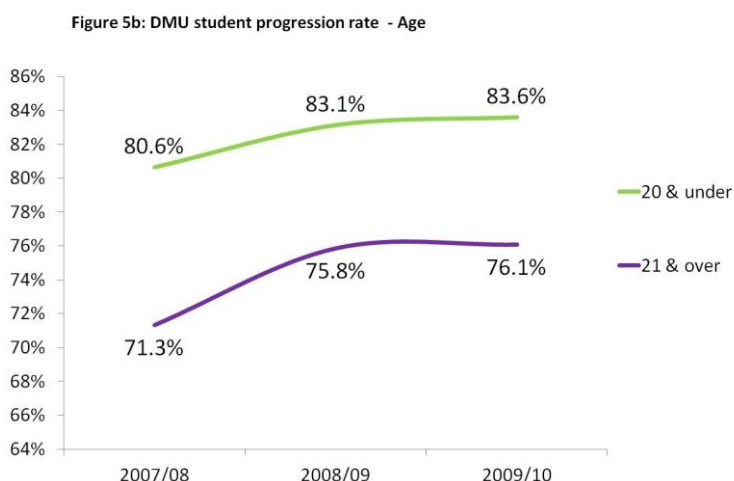

7.2. Age

Figure 5b shows the progression rate for '20 & under' and '21 & over' DMU students from 2007/08 to 2009/10.

'20 & under' students have a higher progression rate than '21 & over' students.

The progression rate between the two groups has reduced over the 3 year period, with the difference of 7.5% in 2009/10.

All data is shown in the appendix, table 5b on page 35.

7.3. Ethnicity

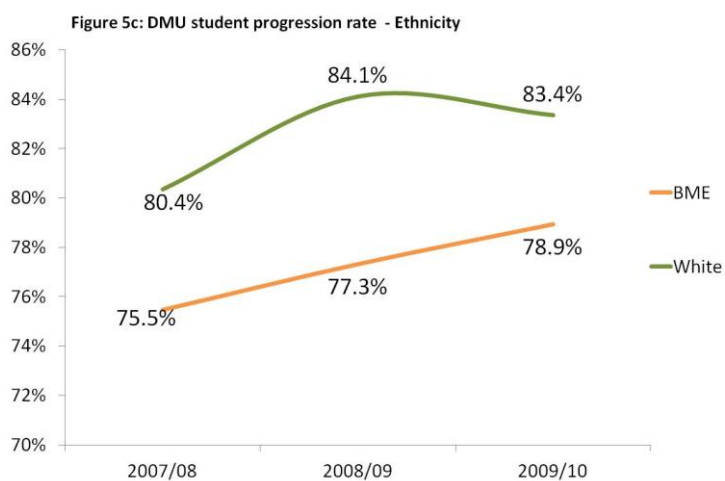

Figure 5c shows the progression rate for Black and minority ethnic (BME) and White DMU students from 2007/08 to 2009/10.

White students have a higher progression rate than BME students.

The Progression rate between the two groups has reduced over the 3 year period, with a difference of 4.4% in 2009/10.

All data is shown in the appendix, table 5c on page 36.

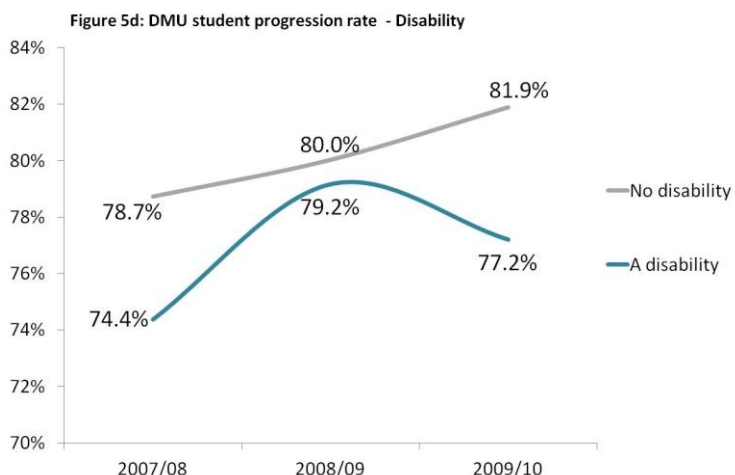

7.4. Disability

Figure 5d shows the progression rate for disabled and not disabled DMU students from 2007/08 to 2009/10.

Students without a disability have a higher progression rate than students with a disability.

The progression rate between the two groups has increased over the last 2 years, with a difference of 4.7% in 2009/10.

All data is shown in the appendix, table 5d on page 37.

8. Good Honours Attainment rate

The following analysis looks at the profile of final year students and the classification of degree with a focus on the proportion that achieve a first or upper second class degree classification (good honours). The analysis is for all first degree qualifying students.

Please note: the 2009/10 report showed all undergraduate qualifiers good honours attainment which has now been changed to all first degree qualifiers.

National comparable data, sourced from heidi, provides context to the DMU values. This data is only available for first degree students hence the reason for the change since the previous year. This measure is consistent with the DMU key performance indicator and the DMU Access Agreement measure which is for full time first degree students only.

8.1. Gender

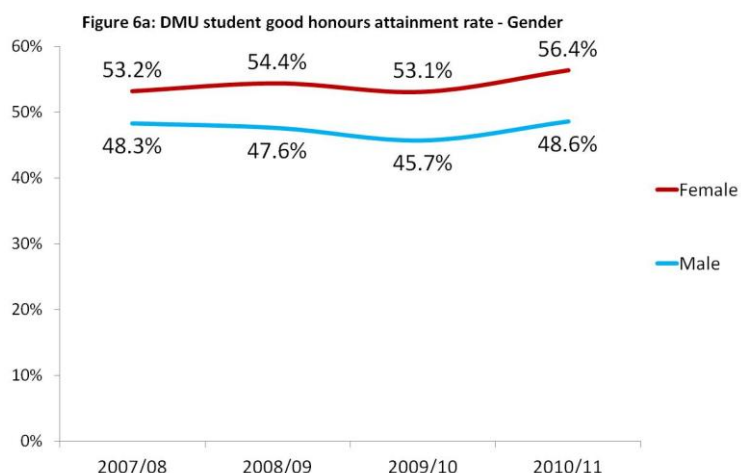

Figure 4a shows the good honours attainment rate for male and female DMU students over the last 4 years.

Female students have a higher good honours attainment rate than male students.

The good honours attainment gap between the two groups has increased slightly over the last 4 years, with a difference of 7.8% in 2010/11.

Nationally, the gap has reduced slightly from 4.9% in 2007/08 to 4.3% in 2010/11. (heidi)

All DMU data is shown in the appendix, table 6a on page 38.

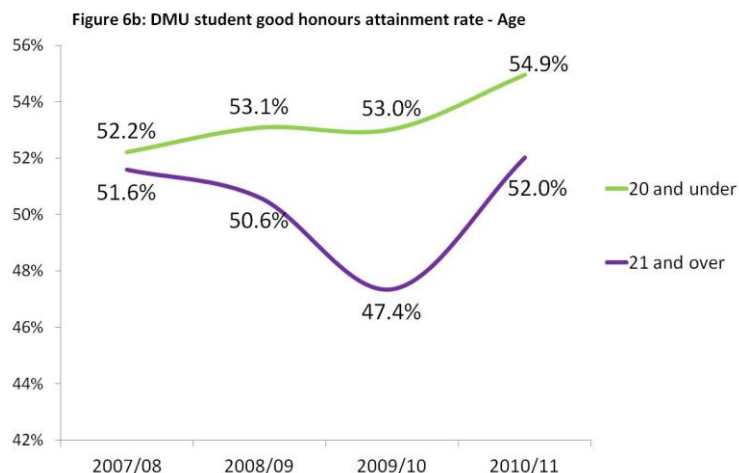

8.2. Age

Figure 4b shows the good honours attainment rate for '20 & under' and '21 & over' DMU students for the last 4 years

'20 & under' students have a higher good honours attainment rate than '21 & over' students.

The good honours attainment gap between the two groups has increased over the last 4 years, with a difference of 2.9% in 2010/11. All DMU data is shown in the appendix, table 6b on page 38.

Nationally, the gap has increased from 0.4% in 2007/08 to 1.7% in 2010/11. (heidi).

8.3. Ethnicity

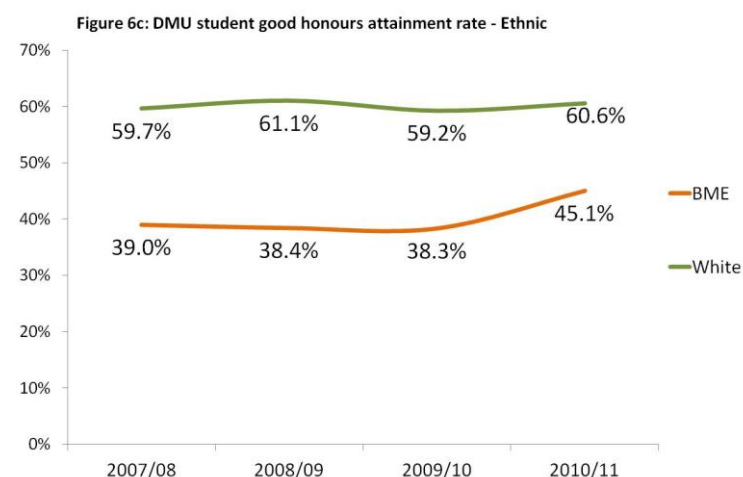

Figure 4c shows the good honours attainment rate for Black and minority ethnic (BME) and White DMU students for the last 4 years.

White students have a higher good honours attainment rate than BME students.

The good honours attainment gap between the two groups has decreased over the last 4 years, with a difference of 15.5% in 2010/11. All data is shown in the appendix, table 6c on page 39. Nationally, the gap has remained around 17% over the period (17.5% in 2010/11). (heidi)

The university Retention & Achievement of Ethnic Minority Students (RAEMS) working group has undertaken quantitative and qualitative research to better understand differences in student achievement at DMU. For further details please contact [Nick Allsopp](#)

8.4. Disability

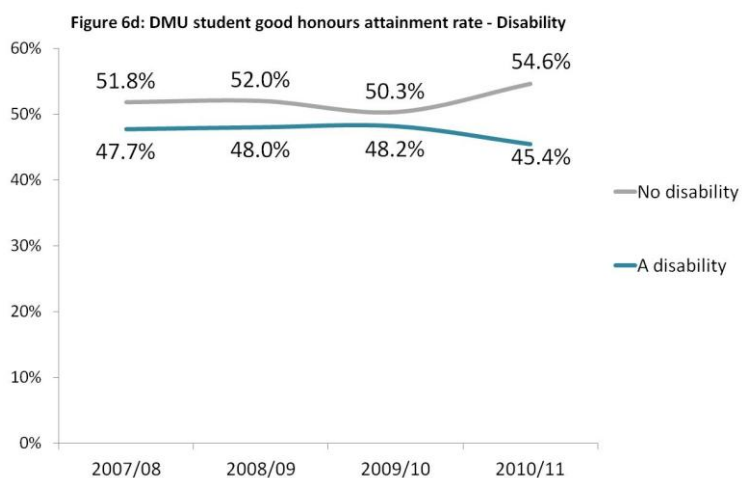

Figure 4d shows the good honours attainment rate for disabled and not disabled DMU students for the last 4 years.

Students without a disability have a higher good honours attainment rate than students with a disability.

The good honours attainment gap between the two groups has increased slightly over the last 4 years, with a difference of 9.2% in 2010/11, which is also the largest gap over the period.

All data is shown in the appendix, table 6c on page 40.

Nationally, the gap has remained around 2.7% over the same period (2.5% in 2010/11). (heidi)

APPENDICES

All data rounded to multiple of 5 as per HESA rounding strategy, see:

<http://www.hesa.ac.uk/index.php/content/view/146/178/> for more details. Analysis based on actual values.
